1.3. Remarques

Inscription via le Register et création de champs dans le formulaire à tester en priorité

Uses Cases

- Je m'inscris en front-office (lien direct vers profil) => on constate que l'inscription est sur la base myKEY4
- Je fais un import d'inscrits en back-office => idem
- Je fais une MAJ multiple => idem
- Je modifie le formulaire d'inscription en créant un nouveau champ, je vais dans une fiche remplir ce champ => on constate l'impact dans la base d'inscrits myKEY4
- Je supprime une valeur dans une liste déroulante (utilisée par un participant) => on constate que dans myKEY4 la valeur a aussi disparue pour les fiches qui l'utilisaient
